Making the Most of Concrete Leftovers: Profitable Solutions for Residual Concrete

Structural concrete blocks can be used to build storage bays, waste storage bays, retaining walls, boundary walls, fencing, crash protection blocks, fire break walls, security barriers, traffic management, and a perfect solution for temporary counterweight applications, such as scaffolding and fencing on construction sites or road works, as well as anchoring during events.

Ceracre is committed to implementing sustainable manufacturing practices. As part of our commitment to sustainable practices, we use residual concrete, recycled concrete aggregates, and recycled aggregates in the manufacture of our Structural Concrete Blocks.

With the efforts towards sustainability, manufacturers have been able to reduce the environmental impact of their operations and contribute to the broader goal of sustainability.

Thinking ahead
Reduce Reuse Recycle
